

## MANAGE, MONITOR AND MAINTAIN YOUR FIREWALLS

Firewalls are a key component to any organizations network security. However, without proper and proactive management your firewall is ultimately ineffective. Layer 3 Communications offers **Firewall as a Service (FWaaS)** in an effort to manage, monitor and maintain your firewall systems.

With a dedicated focus on network security our team of professionals protect your key information assets across networks, hosts, applications, and databases. Once we establish your network and firewall norms we can then address security threats and monitor your network traffic to easily identify and correct atypical use.

Partnering with Layer 3 Communications for your firewall management provides the intelligence and analytics your organization needs to better understand your risks, demonstrate compliance and make better security decisions. Our team has both industry specific knowledge as well as experience across a variety of market verticals, giving them a vast knowledge of your firewalls daily maintenance, software bugs, and overall security.

Layer 3 Communications proactive approach provides both normal and emergency maintenance on your firewall. We alert you to both normal maintenance events as well as emergency remediations. This eliminates from your IT team the burden of firewall management, allowing them to focus on projects that matter to your business.

### LAYER 3 COMMUNICATIONS FWaaS PROVIDES THE FOLLOWING BENEFITS:

- Unrestricted scalability
- Unified security policy
- Full visibility
- Simplifies management
- Frees staff to focus on other tasks
