

INTERNET SEARCH VISIBILITY

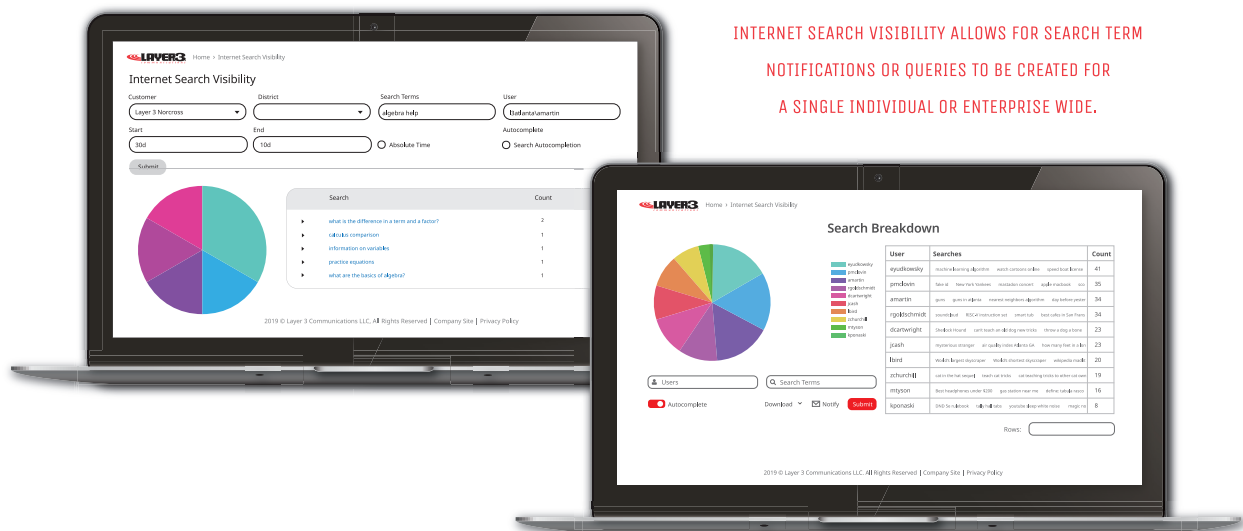

ANTICIPATE THE PROBLEM

Part of the Layer 3 Communications' suite of Security Information Event Management (SIEM) services, **Internet Search Visibility*** is a tool providing insight into user search behavior. Simple and easy to use, the tool generates powerful dashboards for key stakeholders needing to protect their user base. **Internet Search Visibility** has extensive reporting capabilities and supports proactive alerting.

In the education market **Internet Search Visibility** can be particularly powerful. For example, a district administrator might set up her/his dashboard to see a daily report on searches in the STEM space. Or, a principle might use the tool to get an alert if any student in the school searches on a keyword like "guns" or "drugs".

Internet Search Visibility is compatible with all major search engines, including but not limited to Chrome, Google, Yahoo, and Bing. Additionally, the tool has extensive security built in to limit accessibility to authorized users.

Contact your Layer 3 Communications representative or send an email to sales@layer3com.com for more information.
